

GIT COMMANDS FOR UPLOADING FILES TO GITHUB

git init – I started a new Git repository in my lab folder so Git can track my files.

git add . – I added all my files so they're ready to be saved in Git.

git commit -m "message" – I saved a snapshot of my files with a short note about what I did.

git branch -M main – I changed the branch name to main since GitHub uses that as the main branch.

git remote add origin <URL> – I linked my local folder to the GitHub repository I created.

git push -u origin main – I uploaded my files from my computer to GitHub.
